|                                                                                          |                                           |     |
|------------------------------------------------------------------------------------------|-------------------------------------------|-----|
| Binding of Bile Acids, Oleic Acid, and Organic Anions by Rat and Human Hepatic Z Protein | <i>Hajime Takikawa and Neil Kaplowitz</i> | 385 |
|------------------------------------------------------------------------------------------|-------------------------------------------|-----|

## MEMBRANES, CELL SURFACES, AND RECEPTORS

|                                                                                                                 |                                                          |     |
|-----------------------------------------------------------------------------------------------------------------|----------------------------------------------------------|-----|
| Cooperative Effects of $\text{Ca}^{2+}$ and $\text{Sr}^{2+}$ on Sarcoplasmic Reticulum Adenosine Triphosphatase | <i>José A. Holguín</i>                                   | 9   |
| Effect of Human Milk Folate Binding Protein on Folate Intestinal Transport                                      | <i>Hamid M. Said, Donald W. Horne, and Conrad Wagner</i> | 114 |
| Isolation and Functional Reconstitution of the Aspartate/Glutamate Carrier from Mitochondria                    | <i>R. Krämer, G. Kürzinger, and C. Heberger</i>          | 166 |

## MOLECULAR BIOLOGY, GENE EXPRESSION, AND DEVELOPMENTAL BIOCHEMISTRY

|                                                                                                                                           |                                                                          |     |
|-------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|-----|
| Structure of Monkey Kidney Cell RNA Polymerase II: Characterization of RNA Polymerase Associated with SV40 Late Transcriptional Complexes | <i>A. Garcia-Carranca, F. Miguel, Michael E. Dahmus, and P. Gariglio</i> | 232 |
|-------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|-----|

## OXYGENASES, MICROSOMES, AND P-450 REACTIONS

|                                                                                                                                                                                                    |                                                                                            |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|-----|
| Carbon-Centered Free Radical Intermediates in the Hematin- and Ram Seminal Vesicle-Catalyzed Decomposition of Fatty Acid Hydroperoxides                                                            | <i>Jörg Schreiber, Ronald P. Mason, and Thomas E. Eling</i>                                | 17  |
| Cadmium-Mediated Inhibition of Testicular Heme Oxygenase Activity: The Role of NADPH-Cytochrome <i>c</i> (P-450) Reductase                                                                         | <i>G. Michael Trakshel, R. Krishnan Kutty, and Mahin D. Maines</i>                         | 175 |
| Digitoxin Metabolism by Liver Microsomal Cytochrome P-450 and UDP-Glucuronosyltransferase and Its Role in the Protection of Rats from Digitoxin Toxicity by Pregnenolone-16 $\alpha$ -carbonitrile | <i>Michael P. Arlotto, Andrew J. Sonderfan, Michella M. McKinney, and Andrew Parkinson</i> | 188 |
| Dicoumarol-Sensitive Glucuronidation of Benzo(a)pyrene Metabolites in Rat Liver Microsomes                                                                                                         | <i>Juan E. Segura-Aguilar, Virginia Barreiro, and Christina Lind</i>                       | 266 |
| The Distinction of Different Types of Cytochromes P-450 from the Yeasts <i>Candida tropicalis</i> and <i>Saccharomyces uvarum</i>                                                                  | <i>D. Sanglard, O. Küppeli, and A. Fiechter</i>                                            | 276 |
| The Mechanism of Cumene Hydroperoxide-Dependent Lipid Peroxidation: The Significance of Oxygen Uptake                                                                                              | <i>Randy H. Weiss and Ronald W. Estabrook</i>                                              | 336 |
| The Mechanism of Cumene Hydroperoxide-Dependent Lipid Peroxidation: The Function of Cytochrome P-450                                                                                               | <i>Randy H. Weiss and Ronald W. Estabrook</i>                                              | 348 |
| Further Characterization of the Polycyclic Aromatic Hydrocarbon Binding Properties of the 4S Protein                                                                                               | <i>William H. Houser, Roman Zielinski, and Edward Bresnick</i>                             | 361 |

## PHYSICAL BIOCHEMISTRY, MACROMOLECULAR STRUCTURE AND FUNCTION

|                                                                                                                                                             |                                                                    |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------|-----|
| Vanadyl (IV) and Vanadate (V) Binding to Selected Endogenous Phosphate, Carboxyl, and Amino Ligands; Calculations of Cellular Vanadium Species Distribution | <i>Bohdan R. Nechay, Luddo B. Nanninga, and Peter S. E. Nechay</i> | 128 |
| Optical Properties of Complexes of Antimalarial Drugs with Ferriprotoporphyrin IX in Aqueous Medium. I. The System Ferriprotoporphyrin IX-Quinine           | <i>G. Blauer</i>                                                   | 306 |

|                                                                                                                                                      |           |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----|
| Optical Properties of Complexes of Antimalarial Drugs with Ferriprotoporphyrin IX in Aqueous Medium. II. The System Ferriprotoporphyrin IX-Quinidine | G. Blauer | 315 |
|------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----|

## PLANT MOLECULAR BIOLOGY, BIOCHEMISTRY, AND PHOTOSYNTHESIS

|                                                                                                       |                 |     |
|-------------------------------------------------------------------------------------------------------|-----------------|-----|
| Cationic Form of $\beta$ -Galactosidase in the Germinating Seeds of <i>Vigna sinensis</i> (Linn) Savi | Tapan K. Biswas | 379 |
|-------------------------------------------------------------------------------------------------------|-----------------|-----|

## PROTEIN STRUCTURE AND FUNCTION

|                                                                                                                                         |                                                                                          |     |
|-----------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------|-----|
| Amino Acid Composition of the Membrane and Aqueous Domains of Integral Membrane Proteins                                                | Charles M. Deber, Christopher J. Brandl, Raisa B. Deber, Lynn C. Hsu, and Xenia K. Young | 68  |
| Rat Brain Hexokinase: Location of the Substrate Nucleotide Binding Site in a Structural Domain at the C-Terminus of the Enzyme          | Mohsen Nemat-Gorgani and John E. Wilson                                                  | 97  |
| Microenvironment of the Enzyme-Bound NADH Is Different in Lobster and Pig Muscle Glyceraldehyde-3-phosphate Dehydrogenase Microcrystals | B. Vértessy, M. Vas, and T. Keleti                                                       | 299 |

## PROTEIN TURNOVER, PROTEOLYSIS, AND POST-TRANSLATIONAL PROCESSING

|                                                                                                                                                                |                                                         |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------|-----|
| Oxidative Inactivation of the Calcium-Stimulated Neutral Proteinase from Human Red Blood Cells by Divicine and Intracellular Protection by Reduced Glutathione | Alessandro Morelli, Marina Grasso, and Antonio De Flora | 1   |
| Tunicamycin Inhibits Proteoglycan Synthesis in Rat Ovarian Granulosa Cells in Culture                                                                          | Masaki Yanagishita                                      | 287 |

## REGULATION OF METABOLISM AND OF ENZYME ACTION

|                                                                                                                                      |                                                                                         |     |
|--------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|-----|
| Hexose Metabolism in Pancreatic Islets: Compartmentation of Hexokinase in Islet Cells                                                | Abdullah Sener, Francine Malaisse-Lagae, Marie-Helene Giroix, and Willy J. Malaisse     | 61  |
| Hepatic 6-Phosphofructo-2-kinase/Fructose-2,6-bisphosphatase: Phosphate Dependence and Effects of Other Oxyanions                    | Paul D. Kountz, Robert W. McCain, M. Raafat El-Maghrabi, and Simon J. Pilkis            | 104 |
| A Dose-Response Study of Forskolin, Stimulatory Hormone, and Guanosine Triphosphate Analog on Adenylate Cyclase from Several Sources | Juan Ruiz, Qi-Huang Shi, and Ren-Jye Ho                                                 | 139 |
| Conditional Inhibition of Forskolin-Activated Adenylate Cyclase by Guanosine Diphosphate and Its Analog                              | Ren-Jye Ho, Qi-Huang Shi, and Juan Ruiz                                                 | 148 |
| Forms of Adenylate Cyclase, Activation and/or Potentiation by Forskolin                                                              | Qi-Huang Shi, Juan A. Ruiz, and Ren-Jye Ho                                              | 156 |
| Inhibition of CA V Decreases Glucose Synthesis from Pyruvate                                                                         | Susanna J. Dodgson and R. E. Forster II                                                 | 198 |
| Partial Purification and Characterization of the Interconvertible Forms of Trehalase from <i>Saccharomyces cerevisiae</i>            | Gisela M. Dellamora-Ortiz, Claudio H. D. Ortiz, José Carlos C. Maia, and Anita D. Panek | 205 |
| <i>r</i> -Galactonolactone in Experimental Galactosemic Animals                                                                      | Eiko Wada                                                                               | 215 |

|                                                                                                                                                                                                                       |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Regulation of 25-Hydroxyvitamin D <sub>3</sub> Metabolism in a Human Promyelocytic Leukemia Cell Line (HL-60): 1,25-Dihydroxyvitamin D <sub>3</sub> Stimulates the Synthesis of 24,25-Dihydroxyvitamin D <sub>3</sub> |     |
| <i>Helmut Reichel, H. Phillip Koeffler, and Anthony W. Norman</i>                                                                                                                                                     | 222 |
| Inability of Glucagon to Regulate Glycogen Metabolism in Rat Hepatocytes Isolated after Fasting and Refeeding High-Carbohydrate Diets                                                                                 |     |
| <i>James B. Blair and James J. Kerbacher</i>                                                                                                                                                                          | 250 |
| A Possible Mechanism of Induction and Translocation into Blood Stream of Rat Alkaline Phosphatase Activity by Bile Duct Ligation                                                                                      |     |
| <i>T. Komoda, I. Koyama, A. Nagata, Y. Sakagishi, M. Kurata, and M. Kumegawa</i>                                                                                                                                      | 323 |

## NUMBER 2, DECEMBER 1986

### INVITED PAPER

|                                                                        |     |
|------------------------------------------------------------------------|-----|
| DNA-Protein Crosslinking by Heavy Metals in Novikoff Hepatoma          |     |
| <i>Andrzej Wedrychowski, Warren N. Schmidt, and Lubomir S. Hnilica</i> | 397 |

### COMMUNICATIONS

|                                                                                                                                               |                                                                 |     |

# Instructions to Authors<sup>1</sup>

*Archives of Biochemistry and Biophysics* is an international journal dedicated to the dissemination of fundamental knowledge in all areas of biochemistry and biophysics. **Short Communications** and **regular manuscripts** that contain new and significant information of general interest to workers in these fields are welcome. Sufficient detail must be included to enable others to repeat the work.

**Short Communications** offer a means of early publication of work of such importance that rapid publication is warranted. They should not exceed 15 double-spaced typed manuscript pages in length (including text, bibliography, tables, and figures). To expedite review and processing of communications, authors may send them directly to an Executive Editor most closely associated with the subject category of the communication. Communications sent to the Editorial Offices of the journal (see below) will be assigned to an Executive Editor.

Manuscripts should be written in clear, concise and grammatical English and should be submitted in quadruplicate (one original and three photocopies), including four sets of figures, to:

*Archives of Biochemistry and Biophysics*  
Editorial Office  
Seventh Floor  
1250 Sixth Avenue  
San Diego, California 92101

Failure to receive the required number of copies of the manuscript may delay review. All copies of halftone artwork *must* be glossy prints or originals; photocopies of halftones do not show sufficient detail to be used for the review process. *In the case of rejected manuscripts only one copy of the manuscript will be returned to the author.*

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out. Abstracts of oral or poster presentations are not considered to constitute previous publication. Presentation of material in preliminary communications normally will not preclude publication of a full paper in *Archives*, provided that the full paper contains additional information that justifies its publication and does not repeat the presentation of the same data that supported the preliminary communication. The manuscript should be accompanied by copies of all preliminary communications and of all relevant manuscripts that are in press or under editorial consideration by another journal. Authors must verify the wording of any cited personal communication with the persons who supplied the information and obtain approval for the use of their names in connection with the quoted information or for the citation of unpublished work; written evidence of such approval should accompany the manuscript. All material published in *Archives* represents the opinions of the authors and should not be construed to reflect the opinions of the Editors or the Publisher.

Authors should suggest competent reviewers in their field and may also suggest individuals whom they wish to have excluded from the review process. The corresponding author will receive a decision letter from the Executive Editor. Revised manuscripts and correspondence concerning such manuscripts should be sent to the Executive Editor at the address indicated on the decision letter. Revised manuscripts should be accompanied by a copy of the unrevised version.

Many acceptable papers require minor revision or condensation. It is in the mutual interest of both the authors and the journal that amended manuscripts be returned promptly. A revised paper will retain its original date of receipt only if it is received by the Executive Editor within 2 months of the date of return to the author.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

*Communications* offer a means of early publication of work of such importance that rapid release is warranted. Normally they should not exceed 15 manuscript pages in length (including text, bibliography, tables, and figures). The review and printing of such papers will be expedited to provide earliest possible publication.

*Form of Manuscript.* Manuscripts should be typewritten and double-spaced throughout on one side of 8.5 × 11-in. white paper, with 1-in. margins on all sides. All pages should be numbered consecutively.

*Subject Areas.* Authors should specify on page 1 of the manuscript the Subject Area of the article submitted. See the back cover for the listing of the Subject Areas.

*Page 1* should contain the article title, author(s), affiliation(s), a short running title (abbreviated form of title) of less than 65 characters including letters and spaces, the appropriate subject category for listing in

---

<sup>1</sup> An extended Instructions to Authors is published in the January issue of *Archives of Biochemistry and Biophysics*. Reprints are available from the Editorial Office upon request. Authors should consult the extended Instructions for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

the Table of Contents, suggestions for index list entries, and the name and complete mailing address (and telephone number if possible) of the person to whom correspondence should be sent.

Page 2 should contain a short abstract of 50–250 words.

Editorial style should conform to the *Handbook for Authors* (American Chemical Society).

Footnotes to the text should be identified by superscript Arabic numerals and should be typed double-spaced on a separate sheet; footnotes to tables should be identified by superscript lowercase italic letters (<sup>a,b</sup>, etc.) and placed at the bottom of the table.

Tables should be numbered with Roman numerals and cited consecutively in the text. Each table should be titled and typed double-spaced on a separate sheet. Units must be clearly indicated for each of the entries in the table.

Authors can submit complex tables and mathematical material as camera-ready copy. In this way, they are spared multiple, tedious proofreadings and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single spaced whenever possible and preferably submitted as 5 × 7-in. glossy prints.

Figures should be cited consecutively in the text by Arabic numerals. Legends should be typed double-spaced on a separate sheet. All figures and illustrations are to be submitted in such form as to permit photographic reproduction without retouching or redrawing. Line drawings should be professionally drafted and no larger than 8.5 × 11 in. Letters and numbers should be at least  $\frac{3}{16}$  in. (4 mm) in height (Leroy lettering size 200). Glossy prints of figures properly prepared are acceptable. Illustrations in color can be accepted only if the authors defray the cost.

References should be cited in the text by an Arabic numeral in parentheses and listed at the end of the paper in numerical order typed double-spaced on a separate sheet. Abbreviations of journal titles should conform to those of *Chemical Abstracts Service Source Index*, 1985. Please note the following examples.

1. JONES, J. B., DILWORTH, G. L., AND STADTMAN, T. C. (1979) *Arch. Biochem. Biophys.* **195**, 255–260.
2. METZLER, D. E. (1977) *Biochemistry: The Chemical Reaction of Living Cells*, p. 298, Academic Press, New York.
3. HARRINGTON, W. F. (1979) in *The Proteins* (Neurath, H., and Hill, R. L., eds.), Vol. 4, pp. 246–409, Academic Press, New York.

*Miniprint supplements* are an effective way of presenting supportive data. They are printed from plates made by photographic reduction from typed pages provided by the author. Types of data that have been published as miniprint supplements include analyses relevant to studies of amino acid or polynucleotide sequences, details of chemical syntheses, preparation of enzymes, extended statistical or mathematical discussions, and X-ray diffraction data. The miniprint supplement is published in the journal, immediately following the parent paper, and is included in the reprints. Since the miniprint supplement is produced from camera-ready copy supplied by the authors with no redaction or editorial changes it is important that the copy be letter perfect and conform to the style of the journal. *Authors will not be permitted to make changes to the miniprint supplement at the proof stage. Any changes necessary in the proof must be made as a typeset "Note added in proof."*

*Proofs* will be sent to the author, with a reprint order form. Authors will be charged for extensive alterations.

*Reprints.* Fifty reprints of each article will be provided free of charge. Additional reprints may be purchased.
